

## The Causes of Rape

### Corrections are indicated in bold

#### Errata

p.34, 3<sup>rd</sup> par., “Females appear to mate much more often **than** they need to.”

p.44, 1<sup>st</sup> par., “*Alternative strategies* are different strategies adopted by genetically different classes of **individuals**”.

p.78, 2<sup>nd</sup> par., “In contrast, offender samples are typically much older, and many of these offenders would be classified as **life-course-persistent** offenders.”

p.89, Exhibit 4.4, 1<sup>st</sup> par., “As we discussed in chapter 3, females in some nonhuman species use resistance as a tool of male selection. **Mealey (in press)** developed these ideas in her *sexy son* account of forced mating”.

p.114, Figure 5.3, legend, “The phallometric responses of rapists (black bars,  $n = 14$ ) and nonrapists (gray bars,  $n = 14$ ) to different audiotaped stories.”

p.168, 1<sup>st</sup> par., “Several studies on other populations of sex offenders have confirmed the accuracy of the VRAG and other actuarial instruments in predicting recidivism...”

p.190, 1<sup>st</sup> par., “We hypothesize that another cause of rape is a facultative (or conditional) antisocial response to low embodied capital.”

#### Other corrections

p.64, 4<sup>th</sup> par., “A first-born child has a different social environment than **a younger sibling**.”

p.130, 2<sup>nd</sup> par., drop the sentence “In addition, there is little reason to believe that, except for antisocial personality disorder, rapists differ from other offenders in the prevalence of any mental disorder (Hudson & Ward, 1997).”

p.169, last par., “Thus, our review **covers** programs that included rapists but also included other sex offenders”.

p.198, drop “intellectual” in the last line.
